

## Rose Gold 18 Karat – Beginner Guide (Brush, Swab & Bath Plating)

**Composition:** 75 % gold – 25 % copper

**Fineness:** 18 karat

**Gold content in electrolyte:** approx. 10.1 g gold per liter

This beginner-friendly guide follows established international practice

---

### Purpose and Properties of Rose Gold

Rose gold is a **decorative gold alloy** with a warm reddish tone. Due to its copper content, it is **more sensitive to contamination** than pure gold. Proper surface preparation is therefore essential.

Typical applications:

- Jewellery
- Watch cases
- Decorative metal parts

---

### ⚠ Safety Information

- Not classified as hazardous, but **irritating**
- Wear **protective gloves and safety goggles**
- Work in a well-ventilated area

---

### Suitable Substrates

Recommended:

- Nickel
- Copper
- Brass
- Silver

#### Important:

- Always apply a **thin gold underlayer** (gold flash or 24 kt gold) before rose gold
- This improves adhesion and colour stability

---

### Equipment & Electrical Setup

- **Normal polarity**
- Positive: handpiece with electrode and fabric pad
- Negative: crocodile clip on the workpiece

#### Recommended electrodes:

- Platinum electrode (best results)
- Graphite electrode (alternative)

---

### Process Parameters

- **Voltage:** from 3 volts
- **Temperature:** room temperature is sufficient
- **Consistency:** liquid or thickened (with gelling agent)
- **Rinsing water:** distilled water only

---

### Step-by-Step Instructions

#### 1. Polishing

- Polish the surface to a high gloss
- The better the base finish, the more uniform the rose gold colour

#### 2. Degreasing

- Thoroughly clean with electrocleaner
- Rinse with distilled water
- Do not touch the surface afterwards

### 3. Activation

- Activate at **2.7 volts**
- Short and even treatment
- Rinse with distilled water

### 4. Gold Underlayer

- Apply a thin **gold flash or 24 kt gold** layer
- Only a closed, very thin layer is required
- Rinse

### 5. Rose Gold Plating

- Wash fabric pad with warm water **before use**
- Soak pad well
- Plate using gentle circular movements
- Even movement ensures uniform colour

#### Note:

- No drying time required

---

## Troubleshooting

### Black discolouration during plating:

- Cause: insufficient cleaning or rinsing
- Action:
  - Stop immediately
  - Remove dark areas with polishing compound
  - Rinse again and continue plating

---

## Post-Treatment

- Rinse with distilled water
- Polish to high gloss with a soft cloth and care product

---

## Care & Notes

- Always wash fabric pads with warm water before use
- Use separate pads for different metals
- Rose gold is decorative and not designed for heavy mechanical wear

---
