

Black Nickel - Smoky Nickel

**Also serves as a substitute for
Black Rhodium / Black Ruthenium**

There is no easier way to blacken metal:

Directly on stainless steel, brass, copper, gold or nickel!

Black nickel is plated as follows:

Positive cable with handle and electrode and cloth pad as a plus
Minus cable with crocodile clip attached to the workpiece and connection in the minus pole

Platinum electrode, graphite electrode

Cotton pad

Voltage: from 4 volts

Processing at room temperature

Wear protective gloves, safety goggles if necessary

Can be used in liquid or thickened form - thickening with our gel former possible

Polish surface to gloss by hand or machine

Degrease surface with electrocleaner also the crocodile clip!

Coating on:

Copper - Nickel - Gold - Stainless steel

No drying phase or similar necessary.

Rinse and polish to shine with a soft cloth and our care product!
