

Electrocleaner

The Electrocleaner is ideal for cleaning and degreasing any metallic or conductive surface.

It removes dirt, oil, grease, silicones, oxidation layers from stainless steel and other residues and is also suitable for cleaning jewelry and silver and in an ultrasonic bath.

Application:

Plus cable with handle and electrode and pad in plus.
Minus cable with crocodile clip attached to the workpiece and connection in the minus pole

Stainless steel anode and cloth pad,
Voltage: from 6 volts - if no amps are visible it is no problem!
Wear protective gloves, safety goggles
Use at least at room temperature
Can be used liquid or thickened - thickening with our gel former possible.

Also possible without electricity: Simply rub the surface thoroughly with a sponge or cloth!

Apply to the surface with light circular movements and then rinse with water, even better distilled water.

Note: The ampere rating can hardly be measurable, this does not matter here!
